Summary

Data Analyst with hands-on experience across industry and academic roles leveraging SQL, Python, Power BI, Oracle, SQL Server, and Excel to analyze business and healthcare data. Skilled in data extraction, cleansing, dashboard development, KPI reporting, and reporting automation, with experience delivering actionable insights and collaborating with cross-functional teams in Agile environments.

Work Experience

Data Analyst — Blue Cross Blue Shield, USA

Aug 2025 – Present

- Partnered with Claims Operations, Provider Enrollment, Medical Review, and Compliance stakeholders to gather reporting requirements, define business rules, and translate business questions into KPI dashboards and analytical solutions supporting Medicare Part A & Part B claims processing.
- Performed data profiling and built SQL- and Python-based transformation logic within ETL pipelines to extract Medicare claims and provider data from Oracle, cleanse and validate it, and load curated Medicare claims tables into SQL Server for downstream reporting, improving reporting accuracy by approximately 25%.
- Wrote and optimized complex SQL queries, joins, and views, and contributed to stored procedure logic, while developing interactive Power BI dashboards with 20+ KPIs using DAX, Power Query, SQL Server Agent, and Power BI Service scheduled refresh, reducing manual reporting effort by nearly 60% and supporting a 15% reduction in avoidable claim denials.
- Presented Power BI dashboards, KPI trends, and analytical findings to business stakeholders, translating complex healthcare data into actionable insights that supported operational decision-making, reporting reviews, and continuous process improvements.
- Performed exploratory data analysis and statistical analysis using SQL and Python to evaluate denial trends, reimbursement patterns, provider utilization, and processing delays, applying hypothesis testing where appropriate to validate business improvements.
- Investigated data anomalies, claim exceptions, and reporting discrepancies while analyzing Medicare claims and AI-enabled digital assistant usage data, developing KPI reporting that improved response accuracy, provider self-service, and overall reporting reliability.
- Supported reporting workflows within a CMS Cloud (AWS GovCloud) environment using Amazon S3 for secure healthcare data storage, handling Protected Health Information (PHI) in accordance with HIPAA, CMS, and FISMA High security and data governance standards.

Graduate Teaching Assistant — North Carolina A&T State University, Greensboro, NC

Jan 2024 – May 2025

- Assisted faculty in developing Power BI dashboards and KPI reports to visualize student performance, attendance trends, and course analytics.
- Collected, validated, and analyzed academic data using Python (Pandas), SQL, and Microsoft Excel, supporting ad hoc reporting and data-driven decision-making.
- Automated recurring academic reports performed data cleansing and validation, and documented reporting logic to improve reporting accuracy and efficiency.
- Conducted Python and Data Structures lab sessions, mentored students, and collaborated with faculty on course planning, reporting requirements, and academic assessments.

Data Analyst — HCLTech, Hyderabad, India

May 2022 – Jun 2023

- Partnered with business stakeholders to gather reporting requirements, define business rules, and develop analytical solutions supporting operational reporting, KPI tracking, and business decision-making.
- Built SQL and Python (Pandas) transformation logic within Azure Data Factory ETL workflows to extract, cleanse, and validate operational data from Oracle and SQL Server, and pulled curated datasets from Azure Blob Storage to feed operational dashboards and ad hoc analysis requests.
- Wrote and optimized SQL queries, joins, and views, and contributed to stored procedure logic, while developing interactive Power BI dashboards with 15+ operational KPIs using DAX, Power Query, SQL Server Agent, and Power BI Service scheduled refresh, reducing manual reporting effort by approximately 50% and improving reporting consistency.

- Performed exploratory data analysis using SQL and Python to identify operational trends, reporting discrepancies, and business performance patterns, providing data-driven recommendations that supported continuous process improvements.
- Presented Power BI dashboards and analytical findings to business stakeholders, validating KPI changes during UAT and translating complex operational data into actionable insights that supported reporting enhancements and production releases.
- Supported cloud-based reporting workflows within the Microsoft Azure environment, automating secure data movement, scheduled reporting refreshes, and business intelligence delivery across Agile Scrum teams using Jira.

Projects

Hospital Readmission Risk Analysis

- Extracted, transformed, cleansed, and validated 100K+ patient encounter records using SQL and Python (Pandas), performing exploratory data analysis to identify readmission trends, clinical risk factors, and healthcare utilization patterns while preparing analytics-ready datasets.
- Developed an interactive Tableau dashboard with 15+ healthcare KPIs to monitor 30-day readmission rates, diagnosis categories, patient demographics, length of stay, and prior inpatient visits, enabling dynamic filtering and reducing manual reporting effort by approximately 65%.
- Built a Streamlit-based clinical decision support application using Kaplan-Meier Survival Analysis, Cox Proportional Hazards, and Random Forest models to predict patient readmission risk, improving risk identification with approximately 86% classification accuracy and supporting proactive intervention planning.

Employee Attrition Survival Analysis & Retention Optimizer

- Extracted, transformed, and validated employee workforce data using SQL and Python (Pandas), performing exploratory data analysis to identify attrition trends, workforce patterns, and key retention drivers while preparing reporting-ready datasets for business analysis.
- Designed an interactive Power BI dashboard using Power Query, DAX measures, and Power BI Service to visualize 15+ HR KPIs, attrition rates, overtime impact, tenure trends, and workforce performance, reducing manual reporting effort by approximately 70%.
- Developed a Streamlit-based retention optimization application using Kaplan-Meier Survival Analysis, Cox Proportional Hazards, and PuLP optimization to predict employee attrition risk, prioritize retention strategies under budget constraints, and improve workforce decision-making through an interactive optimization model.

Technical Skills

Programming Languages: Python (Pandas, NumPy), SQL (CTEs, Window Functions, Joins, Views, Stored Procedures, Aggregations)

Databases & Data Warehousing: Oracle, Microsoft SQL Server

Cloud Platforms: AWS, Microsoft Azure

Data Analytics: ETL, Azure Data Factory, Data Extraction, Data Transformation, Data Cleansing, Data Validation, Data Quality, Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis Testing, Trend Analysis, Root Cause Analysis, Predictive Analytics

Data Visualization & Business Intelligence: Power BI, Power BI Service, Power Query, DAX, Tableau, Streamlit, KPI Dashboards, Operational Reporting, Ad Hoc Reporting, Reporting Automation, Data Storytelling

Business & Healthcare: Requirements Gathering, Stakeholder Communication, Business Rule Validation, UAT, Medicare Part A & Part B Claims, Claims Data Analysis, Provider Analytics, Denial & Reimbursement Analysis, Healthcare Data Governance, CMS Cloud, HIPAA, FISMA High

AI & Analytics: AI-Enabled Digital Assistant Analytics, AI Performance Monitoring

Microsoft Tools: Excel (PivotTables, XLOOKUP, Conditional Formatting), SQL Server Agent

Version Control & Collaboration: Git, GitHub, Jira

Methodologies: Agile/Scrum, SDLC

Education

M.S. in Computer Science — North Carolina A&T State University

May 2025

B.Tech in Information Technology — Vignan's Institute of Management and Technology

May 2023

Achievements & Certifications

- **Microsoft Learn** – Power BI Data Analyst Learning Path
- **Databricks Academy** – Data Analyst Learning Path
